## 1. Description

### 1.1 General Description

This production use the PLCC-2 package outline size 2.8\*3.5\*0.65mm

### 1.2 Features

- ▶ PLCC package.
- ▶ Viewing angle:120°.
- ▶ Suitable for all SMT assembly and solder process.
- ▶ Available on tape and reel.
- ▶ Moisture sensitivity level: Level 3.
- ▶ RoHS compliant.

### 1.3 Application

- ▶ Flower production.
- ▶ Tissue culture.
- ▶ Plant factory.
- ▶ Refreshment.
- ▶ General use.

### 1.4 Package Dimension

## 1.5 Product Parameters

Table 1-1 Electrical / Optical Characteristics at Ts=25°C

Item	Symbol	Test Condition	Value			Unit
			Min.	Typ	Max.	
Forward Voltage	$V_F$	$I_F=150\text{mA}$	1.8	2.2	2.4	V
Reverse Current	$I_R$	$V_R=5\text{V}$	---	---	10	$\mu\text{A}$
Total radiant flux	$\Phi_e$	$I_F=150\text{mA}$	40	45	---	mW
Peak wavelength	$\lambda_p$	$I_F=150\text{mA}$	585	590	595	nm
Viewing Angle	2 $\theta$ 1/2	$I_F=150\text{mA}$	---	120	---	deg
Thermal Resistance.	$R_{THJ-S}$	$I_F=150\text{mA}$	---	15	---	$^{\circ}\text{C}/\text{W}$

Table 1-2 Absolute Maximum Ratings at Ts=25°C

Parameter	Symbol	Rating	Units
Power Dissipation	$P_D$	0.3	W
Forward Current	$I_F$	150	mA
Peak Forward Current	$I_{FP}$	200	mA
Reverse Voltage	$V_R$	5	V
Electrostatic Discharge (HBM)	$E_{SD}$	2000	V
Operating Temperature	$T_{OPR}$	-40 ~ +85	
Storage Temperature	$T_{OPR}$	-40 ~ +100	
Junction Temperature	$T_J$	115

## 2. Packaging

### 2.1 Packaging Specification

Package:4000pcs/reel.

#### 2.1.1 Carrier Tape Dimension

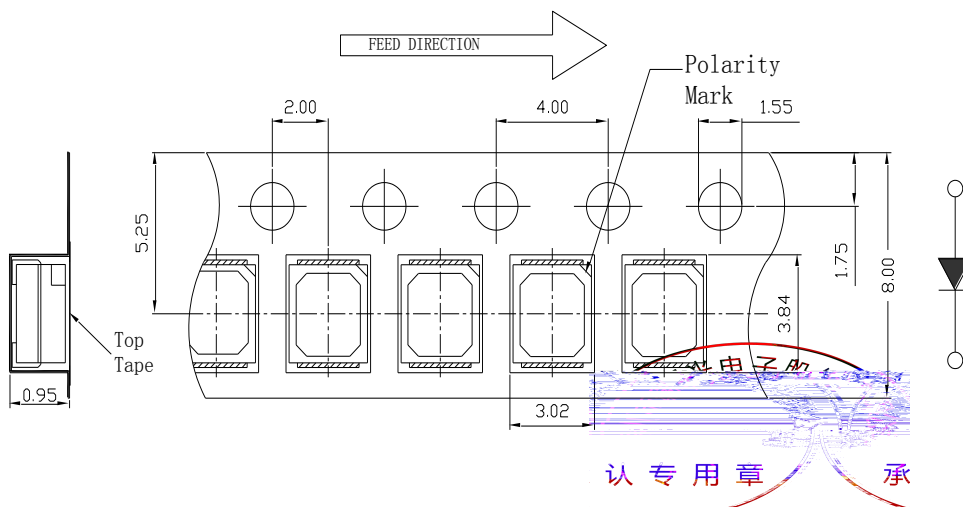

Fig.2-1 Carrier Tape Dimension

## 2.1.2 Reel Dimension

Table 2-1 Reel Dimension

A	12±0.1mm
B	178±1mm
C	60±1mm
D	13.0±0.5mm

Fig.2-2 Reel Dimension

Notes:

The tolerances unless mentioned  $\pm 0.1\text{mm}$ . Unit : mm .

## 2.1.3 Label Form Specification

Table 2-2 Label Form Specification

PART NO.	Part Number
SPEC NO.	Spec Number
LO26.7ET6en-l	

Fig. 2-3 Label Form Specification

## 2.4 Reliability Test Items And Conditions

Table 2-3 Reliability Test Items And Conditions

Test Items	Ref.Standard	Test Condition	Time	Quantity	Ac/Re
Reflow	JESD22-B106	Temp:260 max T=10 sec	3times.	10Pcs.	0/1
Temperature Cycle	JESD22-A104	100 30 min. ↑↓5 min -40 30 min.	300 Cycles	10Pcs.	0/1
Thermal Shock	JESD22-A106	-40 15min ↑↓10s 100 15min	300 Cycles	10Pcs.	0/1
High Temperature Storage	JESD22-A103	Temp:100	1000Hrs.	10Pcs.	0/1
Low Temperature Storage	JESD22-A119	Temp:-40	1000Hrs.	10Pcs.	

Notes:

1. U.S.L: Upper standard leve. L.S.L: Lower standard level.
2. The above reliability tests is based on the verification of a single/strip LED of Refond's existing experimental platform, the reliability experiment was taken under good heat dissipation conditions. when customers applies the LED to the series and parallel circuit, should take consideration of all the factors such as the current, voltage distribution, heat dissipation and others.
3. The technical information shown in the data sheets is limited to the typical characteristics and circuit examples of the referenced products. It does not constitute the warranting of industrial property nor the granting of any license.

### 3. SMT Reflow Soldering Instructions SMT

#### 3.1 SMT Reflow Soldering Instructions SMT

Fig.3-1 SMT Reflow Soldering Instructions SMT

Table 3-1 SMT Reflow Soldering Instructions SMT

Average temperature rise speed (T <sub>max</sub> )	Max 3 °C/ s
Preheating: minimum temperature (T <sub>min</sub> )	150 °C
Preheating: Max temperature (T <sub>max</sub> )	200 °C
Preheating: Time (T <sub>min</sub> -T <sub>max</sub> )	60s-120s
Time limited to maintain high temperature: the temperature (T <sub>L</sub> )	217 °C
Time limited to maintain high temperature: The Time (t <sub>L</sub> )	Max 60s
Peak /Classification of temperature: (T <sub>P</sub> )	260 °C
Time limit classification of peak temperature time (t <sub>p</sub> )	Max 10s
Hold time within 5 °C with the actual peak temperature (TP)	Max 30s
Cooling speed	Max 6 °C/ s
Needed time from 25 °C to T <sub>p</sub>	Max 8 minutes

Notes:

- (1) Reflow soldering should not be done more than twice. If more than 24 hours between the two solderings , LED will be damaged.
- (2)When soldering , do not put stress on the LEDs during heating.

3.1.1 Soldering Iron

- (1) When do soldering by hand, keep the temperature of iron below less 300 less than 3 seconds.
- (2) Soldering by hand should be done only one time.

3.1.2 Repairing

Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or not be damaged by repairing.

(4) Handle the component along the side surface by using forceps or appropriate tools; Do not directly touch or Handle the silicone lens surface, it may damage the internal circuitry.

Fig 4-1 Operate Method

(5) In designing a circuit, the current through each LED can not exceed the absolute maximum rating specified for each LED. In the meanwhile, resistors for protection should be applied, otherwise slight voltage shift will cause big current change, burn out may happen. The driving circuit must be designed to allow forward voltage only when it is ON or OFF. If the reverse voltage is applied to LED, migration can be generated resulting in LED damage.

(6) Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color change and so on. Please consider the heat generation of the LEDs when making the system design.

(7) Compared to standard encapsulants, silicone is generally softer, and the surface is more likely to attract dust, requiring special care during processing. In cases where a minimal level of dirt and dust particles cannot be guaranteed, a suitable cleaning solution must be applied to the surface after the soldering of components. Refond suggests using isopropyl alcohol for cleaning. In case other solvents are used, it must be assured that these solvents do not dissolve the package or resin. Ultrasonic cleaning is not recommended. Ultrasonic cleaning may cause damage to the LED.

Table 4-1 Storage

Conditions		Temperature	Humidity	Time
Storage	Before Opening Aluminum Bag	≤30°C	≤75%	Within 1 Year From Date
	After Opening Aluminum Bag	≤30°C	≤60%	24hours
Baking		60±5°C	-	≥24hours

(8) If the moisture absorbent material silica gel has faded away or the LEDs have exceeded the storage time, baking treatment should be performed after unpacking and based on the following condition 65 5 for above 24 hours.

If the package is flatulence or damaged, please notify the sales staff to assist.

(9) Similar to most Solid state devices; LEDs are sensitive to Electro-Static Discharge (ESD) and Electrical Over Stress (EOS).

(10) Other points for attention, please refer to our relevant information.
